

Access It! Security as a Service Solution

Access It! by acre security is a powerful, scalable Access Management Software solution. Access It! is a leading platform for any size system, from entry-level, single-user systems to multi-user, enterprise level global deployments. Designed from the ground up with the end user in mind, Access It! delivers one the most user-friendly access control systems on the market today.

With Access It! Security as a Service, we've taken the installation and management functions of the system in house so you can focus on what you do best, growing your business.

Benefits of Security as a Service

Cost Savings

Security as a Service allows for less reliance on internal IT departments for deployment and on-going maintenance. The cost savings allow for investment into other parts of your business.

Network Security

Deploying your access system "as a Service" provides additional cyber security protection. Hosting facilities are SAS Type II, audited, Tier 4 Data Centers that meet ISO 9001, SOC 2 Type II, SOC 3, PCI-DSS and HIPAA compliance. They are secured 24/7/365 with EAC and Video Surveillance with documented Ingress and Egress audits. In addition, disaster recovery and power backup are available throughout all locations.

Remote Management

Access It! SaaS can be managed by your team anywhere, anytime. Granular User Group permissions allow delegation of control of your business... from simple Cardholder management – to full Administrative control. Additionally, Access It! SaaS allows remote management by the Security Integrator – allowing faster response time and easier troubleshooting of issues.

Monthly Recurring Revenue

As an integrator, recurring monthly revenue helps you better plan your business operations while enjoying the benefits of lowering the deployment costs of systems. Acre security takes the setup and management of servers and databases off your plate.

As an End User, Access It! SaaS allows for more flexible spending. It eliminates the need for a large capital expense to purchase the system software licensing upfront for servers and workstations. Recognizing the cost as an operating expenditure can ease the stress on yearly budgets.

Dedicated Server Deployment

Access It! SaaS is deployed in our hosting partner's data center environment where each customer enjoys a dedicated server for their application, allowing for ultimate scalability and ease of management.
